

# WLAN Performance Measurement

Vipin M

AU – KBC Research Centre

# Overview

Why Network performance Measurement

How Network performance is Measured

Iperf

Jperf

Test Setup

# Why Network performance Measurement

## Network performance metrics

One-Way Delay (OWD)

Round-Trip Time (RTT)

**Delay Variation (Jitter)**

**Packet Loss**

Packet Reordering

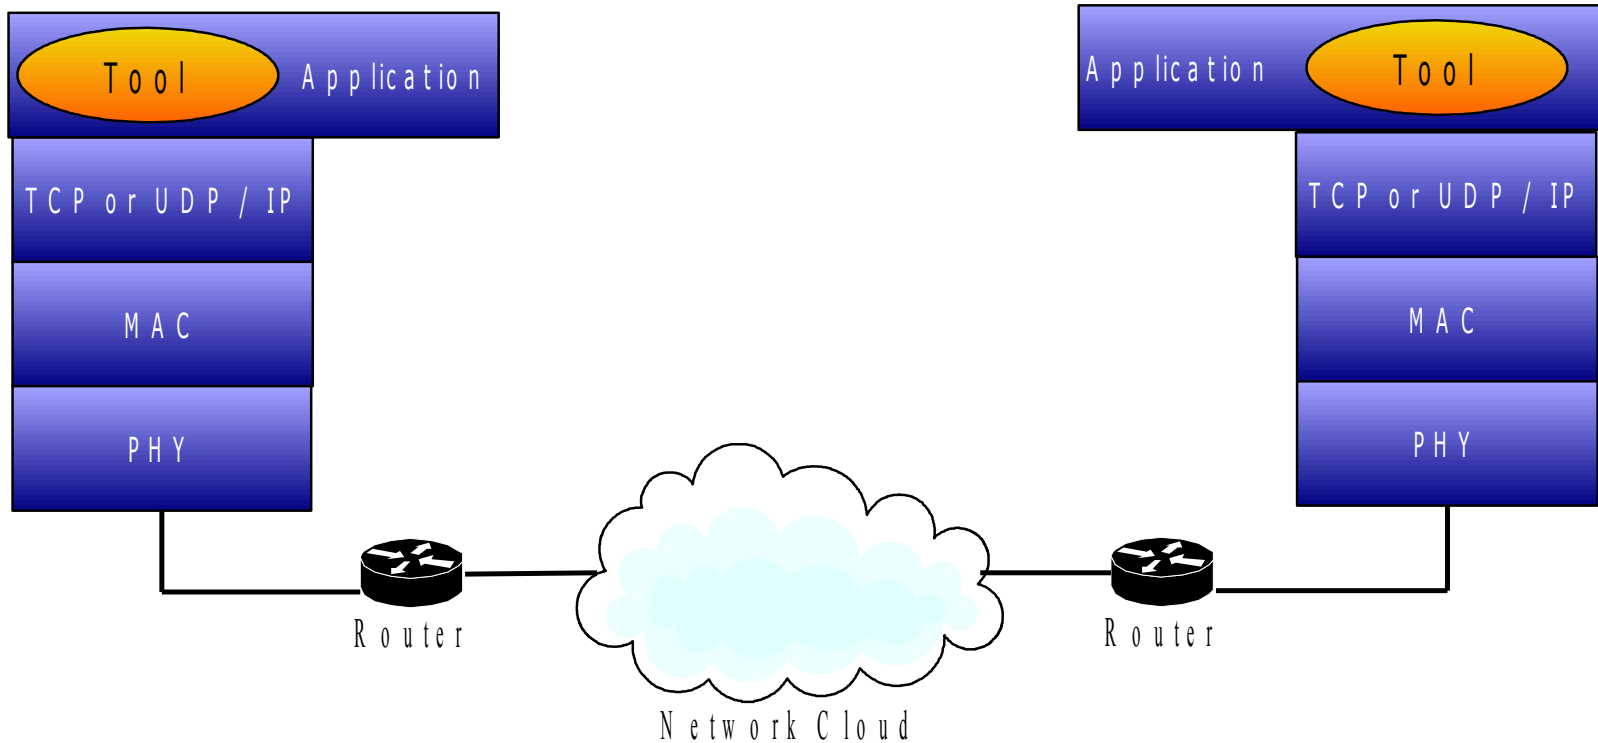

Maximum Transmission Unit (MTU)

**Available Bandwidth ( Throughput )**

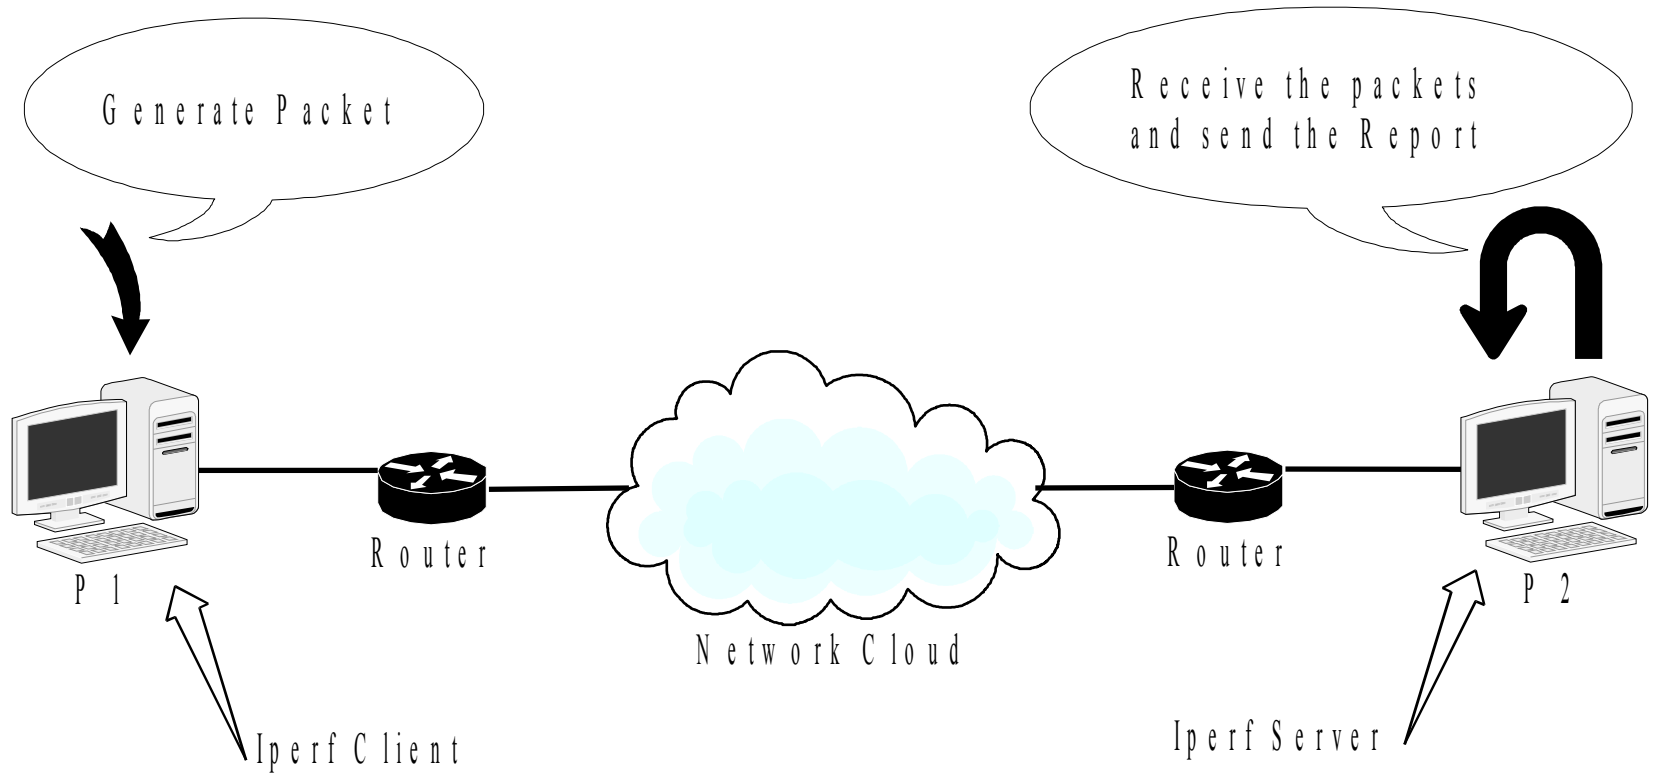

Link Capacity

Bandwidth Delay Product (BDP)

# How Network performance is Measured

# Iperf

## Modes

TCP  
UDP

## Components

Server  
Client

# Network Performance Measurement in WLAN

## Performance Measurement

P1 in Wireless and P2 in Wired Network

Both P1 and P2 in Wireless

# Jperf

GUI interface for Iperf  
Provide all options as a parameter entry  
Also plot the throughput graph

# Test Setup

Linux Laptop  
+  
Iperf / Jperf  
( P1 )

Commercial  
off the shelf products

Access Point

Linux Laptop  
+  
Iperf / Jperf

( P2 )

```
“ Iperf -c <host> ”  
Iperf -c 192.168.2.73  
  
-p <num_streams> test with parallel TCP streams  
-w <buffer_size> set socket buffer size
```

```
“ Iperf -s -D > iperfLog ”  
Iperf -s -D /var/log/iperfLog  
  
Iperf can run as a daemon
```
